

While no two humans are exactly the same, we are all of one race, the human race, and we all share the experience of life in an essentially identical carbon-based life-form structure. We all work for continuing survival while in this structure, and hope for a happy, safe, and good life for ourselves and for our loved ones. Therefore, everyone has a common desire for the best life attainable. "Utopia" is the word used to denote the best life attainable. Since each person has their own unique vision of Utopia, the only universally agreeable description of Utopia is, "the ability for each person to live in their own vision of paradise." Humanity should strive to obtain that ability. This book shows how Utopia can be achieved.

*Jon Will is a lawyer with a masters in business administration who passed the certified public accountant examination. His diverse work experience has given him expertise with how governmental institutions and business organizations function. This is his first publication.*
