

Economical 2 in 1 Plate Processor

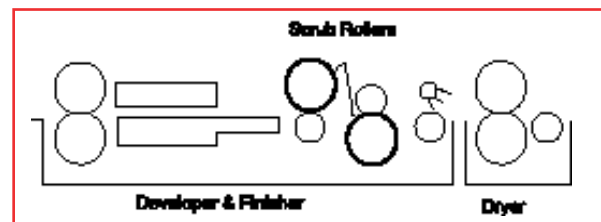

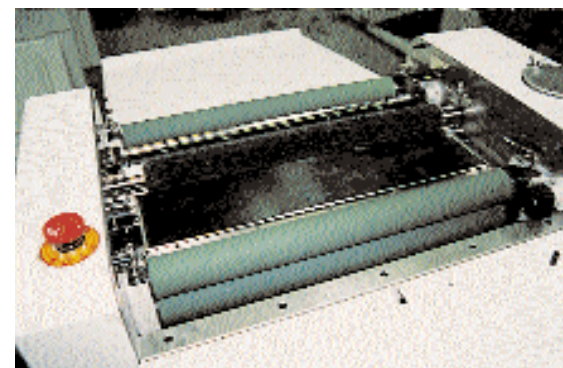

METAL
PLATE
PROCESSORS

Developer solutions that also contain finisher are referred to as 2 in 1 developer and finisher. Models LP1800S and LP2600S are designed specifically to process metal plates using 2 in 1 developer and finisher. The LP1800S/2600S require fewer rollers and solution tanks than conventional processors. The reduced parts translate into a more compact and economical plate processor.

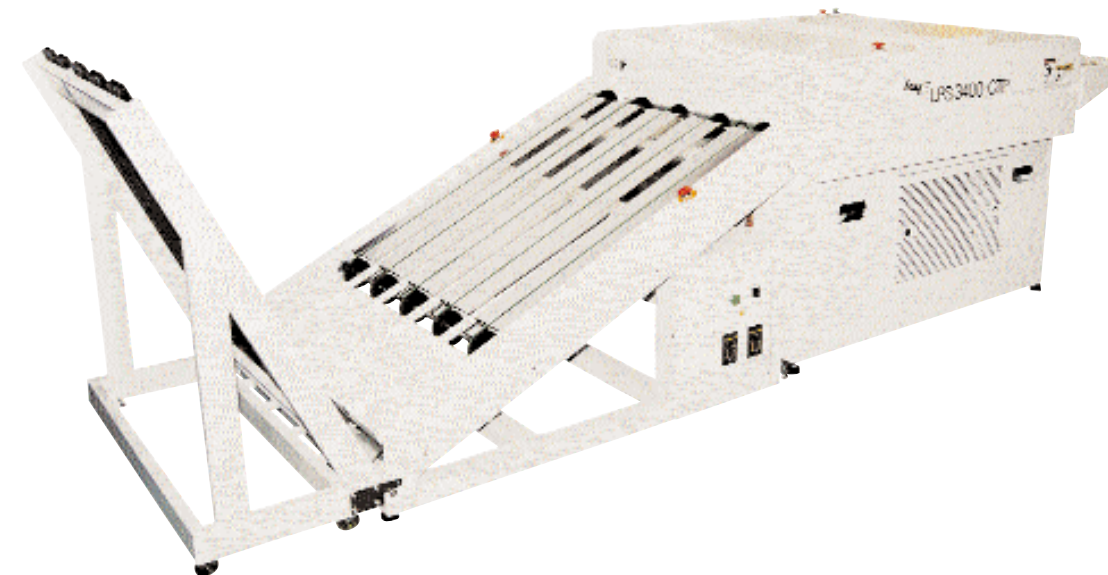

CTP - Thermal - Photopolymer - 2 in 1

LP1800S

LP2600S Plate Path

Quality Assured!

- ✓ LP1800S and LP2600S has two rotating scrub rollers in the processing section (one upper and one lower) making the processor suitable for both single and double sided plates.
- ✓ Electronic controls ensure accurate temperature and speed.
- ✓ Processing solution is constantly circulating and filtered to maintain consistency

Features of the LP1800S & LP2600S

- The LP1800S processes plates up to 18 inches wide while the LP2600S processes plates up to 26 inches wide.
- All rollers and brushes are removable without the use of a tool.
- Developer filter is accessible without removing panels.
- Roller pressure is easy to adjust and maintain.
- Feed tray and receiving table are included with floor models.
- An even more economical version of the 2 in 1 processor is available as a table top model. There are two table top models to process plates up to 18 or 26 inches wide.
